JOURNEYMAN OPEN BOOK EXAM #11 25 Questions One Hour Time Limit

1. Balconies, decks, and porches that are within ____ inches, horizontally, of a dwelling unit must have one receptacle outlet accessible from the balcony, deck, or porch.

(a) 4 (b) 6 (c) 12 (d) 18

2. Unused openings for circuit breakers and switches shall be closed using ____ closures, or other approved means that provide protection substantially equivalent to the wall of the enclosure.

(a) approved (b) identified (c) labeled (d) marked

3. A point on the wiring system at which current is taken to supply utilization equipment is a/an ____.

(a) outlet (b) receptacle (c) junction (b) dead end

4. In dwelling units, circuits supplying luminaires may not exceed ____ volts, nominal, between any two conductors.

(a) 120 (b) 220 (c) 230 (d) 240

5. Extreme ____ may cause PVC conduit to become brittle, and therefore more susceptible to damage from physical contact.

(a) heat (b) cold (c) sunlight (d) moisture

6. In lieu of the GFCI protection required by 210.8 or 590.6(A) GFCI may be placed in the feeder circuit if it is ____.

(a) accessible (b) readily accessible (c) suitable (d) approved

7. Where metal fences are located within ____ feet of the exposed electrical conductors or equipment, the fence shall be bonded to the grounding electrode system with bonding jumpers.

(a) 25 (b) 24 (c) 20 (d) 16

8. A surge protection device is not permitted for circuits exceeding ____ volts.

(a) 300 (b) 450 (c) 600 (d) 1000

9. One or more nonmetallic extensions shall be permitted to run in any direction from an existing outlet, but not on the floor or within ____ from the floor.

- (a) 2" (b) 6" (c) 8" (d) 12"**

10. In multifamily dwellings, Type NM Cable is permitted in buildings that are permitted to be type(s) ____.

- (a) V (b) III (c) IV (d) all of these**

11. Power distribution blocks on ____ conductors shall be marked "suitable for use on the line side of service equipment" or equivalent.

- (a) branch circuit (b) grounding (c) service (d) feeder**

12. A multifamily dwelling is a building that contains ____ or more dwelling units.

- (a) four (b) three (c) two (d) one**

13. The short circuit current rating of emergency system transfer equipment, based on the specific overcurrent protective device type and settings protecting it, shall be ____ on the exterior of the transfer equipment.

- (a) field marked (b) factory marked
(c) factory or field marked (d) factory and field marked**

14. When sizing a branch circuit for a fixed storage-type water heater with a capacity of 120 gallons or less, the water heater is considered a/an ____.

- (a) varying load (b) intermittent load (c) noncontinuous load (d) continuous load**

15. Ground-fault protection of equipment shall be provided for solidly grounded wye electric services of more than 150 volts to ground but not exceeding 1000 volts phase-to-phase for each service disconnect rated 1000 amperes or more. It must be tested ____.

- (a) by the AHJ (b) as part of the design
(c) by the manufacturer (d) when first installed on site**

16. Branch circuits for common areas of a multifamily dwelling shall not be supplied from equipment that supplies an individual ____ or tenant space.

- (a) dwelling unit (b) branch circuit (c) service (d) feeder**

17. Pendant conductors longer than 36" shall be twisted together where not cabled in a/an ____ assembly.

(a) approved (b) listed (c) identified (d) suitable

18. In other than one-and two-family dwelling units, the available fault current and the date of the calculation was performed shall be field marked on the enclosure of ____.

(a) switchgear (b) panelboards (c) switchboards (d) all of these

19. For electric vehicle supply equipment (EVSE), the larger of either the nameplate or ____ VA is used for calculating loads.

(a) 3,600 (b) 5,000 (c) 6,000 (d) 7,200

20. A ground ring electrode shall be no smaller than ____ copper.

(a) #8 (b) #6 (c) #4 (d) #2

21. All nonlocking, 15 and 20 amp, 125v through 250v receptacles located in ____ specified in 210.52 and 550.13 must be listed as tamper-resistant.

(a) dwelling units (b) dwelling unit accessory buildings
(c) common areas of multifamily dwellings (d) all of these

22. If locating a motor's disconnecting means within sight of the motor would result in an increased hazard, the motor controller may act as the required disconnect if it is ____.

(a) serviceable (b) accessible (c) lockable (d) readily accessible

23. A three-way switch is counted as ____ conductor(s) based on the largest conductor connected to the switch in determining conductor fill in a device box.

(a) one (b) two (c) three (d) not required to be counted

24. Dry-type transformers 1,000 volts or less and ____ kVA or less may be installed in hollow spaces of buildings not permanently closed in by the structure.

(a) 50 (b) 60 (c) 75 (d) 115

25. MI cable shall be supported and secured by staples, straps, hangers, or similar fittings, designed and installed so as not to damage the cable, at intervals not exceeding ____.

(a) 3 feet (b) 48" (c) 5 feet (d) 6 feet
